

**Table 6:  
TimeLine for  
Santa Maria Rail Spur, Santa Maria Throughput,  
and Rodeo Propane Recovery Projects.**

4/1/2008	"The Canadian oil sands are projected to become an increasingly important source of oil for the United States, particularly considering recent declines in heavy oil production in Mexico, Venezuela and California. The Canadian oil sands are projected to approach 20 percent of U.S. oil supplies by 2020." <sup>1</sup>
2/23/2009	<b>Throughput</b> Land Use Ap.
6/8/2010	<b>Throughput</b> NOP
8/2011	<b>Propane Recovery</b> : Initial sampling fuel gas for propane/butane
8/2011	<b>Throughput</b> DEIR
5/2012	<b>Throughput</b> Water Supply Assessment
8/2012	<b>Propane Recovery</b> Application BAAQMD
8/1/2012	"But clearly with the California crude decline with the demand decline in California [sic] and the high operating cost that we see in California, a really challenged environment. <i>And so we are working to put advantaged crudes to the front of those refineries.</i> We are looking at our cost structure and how we can improve our cost structure to improve those assets." <sup>2</sup>
9/11/2012	Notice of Final Action for Permit for new truck loading rack Junction Station, minor mod
10/2012	<b>Throughput</b> FEIR
10/9/2012	<b>Rail Spur</b> First botanical & sensitive species field surveys
11/2012	<b>Rail Spur</b> Paleontological Records Search

11/9/2012	Notice of Preliminary Decision SJVAPCD to raise vapor pressure to 11 psi on crude storage tanks at Junction Station
12/13/2012	"California is a challenging operating environment from a regulatory standpoint, we do not see that changing over the midterm. And so <i>our opportunity to improve performance in California is really around getting advantage crudes to the front end of the California refineries, it's rail, it's ship, it's working on optimization of the cost structure and the export capabilities of those refineries. And we'll improve them to the extent that we can.</i> " <sup>3</sup>
Jan-Dec/2013	<b>Propane Recovery:</b> 1 year of data showing 13,970 bbl/day recoverable RTC CBE-84/85
1/10/2013	Approval of Application SJVAPCD to raise vapor pressure to 11 psia on crude storage tanks 1518-5 and 1518-31 at Junction Station
